**A. TECHNOLOGY DEVELOPED**

1. Developed a technology on ***Kusmi lac cultivation on Flemingia semialata***. Under this technology, appropriate planting density and insect stress on the *Flemingia semialata* were determined. This technology is useful for the farmers who which to cultivate the lac under intensive farming system. The host plant *Flemingia semialata* is a bushy and fast growing plant and can be accommodated many plants on a piece of land compared to the conventional host plants such *kusum or palas*. Under irrigated conditions, the lac farmer can also grow vegetable as intercrops in the *semialata* orchard.
2. Under an exploratory trial, determined the inputs (fertilizer dose) and plant management activities required for the rejuvenation of the palas, *Butea monosperma* (potential lac host). Under the trial, an abandoned tree of *palas* was made usable plant by providing the plant and root management inputs.
