The courses require to be oriented to changing trends and development in the technology which is shaping Journalism and communication practice. This requires an understanding, knowledge and skills for adaptation in the form of an upgraded curriculum and a restructuring of the pedagogy. Curriculum is the best way to address the way students learn and become more well-versed with the changes occurring rapidly not only in the technology sphere but in the frontier areas of social, economic, sciences, environment and health. But at the same time critical thinking is an important element in any cognition process. This requires following certain basic principles of scientific approach in the pedagogy and learning outcome.
