## MCS-211 : DESIGN AND ANALYSIS OF ALGORITHMS

Time: 3 Hours Maximum Marks: 100

Weightage: 70%

Note: (i) Question No. 1 is compulsory.

- (ii) Attempt any three questions from the rest.
- (a) Write Euclid's algorithm to find the GCD of
   two natural numbers m and n.

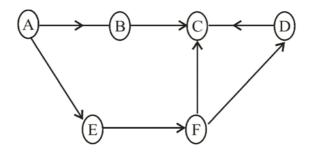

(b) Arrange the following growth rates in increasing order:

$$O(n^2)$$
,  $O(2^n)$ ,  $O(n \log n)$ ,  $O(2 !)$ ,

O(1),  $O(\log n)$ 

MCS-211

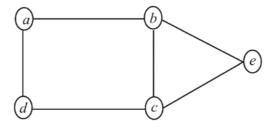

- (c) Give a recessive function to find the height of a binary tree. What is the running time of this algorithm?
- (d) Compute  $x^{283}$  by using left-to-right binary exponentiation.
- (e) Write binary search algorithm and evaluate its time complexity in the best and worst case.
- (f) Find the topological ordering of the following graph:

(g) For the following given letter and their frequencies, construct the Huffman tree: 5

$\mathrm{C}_i$	$f_i$
a	65
b	3
c	4
d	10
e	3
f	6

- (h) What are the disadvantages of using Dijkstra's algorithm? List out any four. 5
- 2. (a) Define a BFS tree. Give the breath first traversal for the undirected graph given below, starting from vertex 'a':

Also give any *three* applications of DFS.

(b) Write Bubble Sort Algorithm. Using bubble sort sort the following sequence:

20, 15, 25, 10, 8, 38, 27, 11

[4]

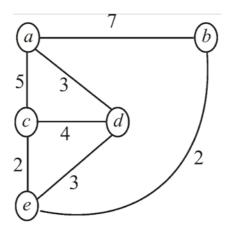

Find the total number of comparisons required by the bubble sort algorithm in sorting the list.

- 3. (a) Write Merge Sort Algorithm. Apply the same to sort the array of elements: 10
  7, 15, 5, 9, 20, 18, 25, 17, 11
  - (b) Explain how dynamic programming can be used to solve matrix chain multiplication.Apply the algorithm to multiply the following:

 $(M_1,M_2,M_3,M_4)$  with dimensions  $(15\times 6,\, 6\times 50,\, 50\times 9,\, 9\times 12)$ 

4. (a) Write Dijkstra's algorithm. Using
Dijkstra's algorithm, find the minimum
distances of all the nodes from starting
node 'a':

10

(b) Solve the following fractional Knapsack problem using Greedy algorithm: 10

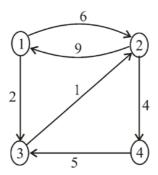

Number of objects = 7

Capacity of Knapsack = 5

Weight of objects,  $W_i = (2, 3, 5, 7, 1, 4, 1)$ 

Profit of objects  $P_i = (10, 5, 15, 7, 6, 18, 3)$ 

5. (a) Apply Floyd Warshall algorithm on the following graph:

Show the matrix  $D_2$  of the graph.

(b) A binomial coefficient is defined by the following recurrence relation:

$$C(n, 0) = 1 \text{ and } C(n, n) = 1 \text{ for } n > 0$$

$$C(n, k) = C(n-1, k) + C(n-1, k-1)$$

for n > k > 0

- (i) Write a recursive function to generate C(n, k).
- (ii) Give an algorithm based on dynamic programming to solve C(n, k).

Compare the time requirements to solve algorithm.

$$\times \times \times \times \times \times \times$$
